**Public Notice of Availability
United States Department of Energy
Savannah River Operations Office
CERCLA Engineering Evaluation/Cost Analysis (EE/CA)
for the Removal Action at the 211-3F Waste Truck Unloading Shed
at the Savannah River Site**

The U. S. Department of Energy (DOE) is proposing to perform a non-time critical removal action at the 211-3F Waste Truck Unloading Shed Site Evaluation Area. The Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) requires a Removal Site Evaluation Report/Engineering Evaluation/Cost Analysis (RSER/EE/CA) to evaluate removal alternatives.

The 211-3F facility consists of a single 50' by 50' steel-framed building with transite siding and roof, constructed on a concrete slab. Located at the north end of the 211-F Outside Facilities, it houses two tank trailer stalls (one each for high-activity and low-activity lab returns); two sumps (one per trailer bay); a steel access platform between the two bays; electrical systems/components; instrumentation; gang valves; and piping to perform unloading, loading, and transfer operations.

The purpose of the RSER/EE/CA, as required by the National Contingency Plan, is to identify the objectives of the removal action and to develop various alternatives that might satisfy those objectives. This RSER/EE/CA evaluates three alternatives, recommends a removal action, and provides for public comment.

The preferred action is to Dismantle and Remove, Fill, and Provide an Eight-Inch Cover. The removal will also include the loading and transporting of the demolition debris and related job control and personal protective equipment waste to a CERCLA Approved Landfill.

DOE plans to release this document for a 30-day public comment period beginning November 14, 2005. The preferred alternative may be modified or changed based on public comments. Following the public comment period, an Action Memorandum will be prepared and transmitted to the US Environmental Protection Agency and the South Carolina Department of Health and Environmental Control by DOE-SR.

This RSER/EE/CA, completed under CERCLA is available for public review from November 14, 2005, to December 13, 2005, at the following locations:

DOE Public Reading Room at the Gregg-Graniteville Library at the University of South Carolina (USC)-Aiken campus in Aiken, SC; Thomas Cooper Library Government Documents Department at USC in Columbia, SC; Reese Library at Augusta State University in Augusta, GA; and Asa H. Gordon Library at Savannah State University in Savannah, GA.

Public Notice of Availability
United States Department of Energy
Savannah River Operations Office
CERCLA Engineering Evaluation/Cost Analysis (EE/CA)
for the Removal Action at the Miscellaneous Rubble Pile (MSRP) Site Evaluation Area
at the Savannah River Site

The U. S. Department of Energy (DOE) is proposing to perform a non-time critical removal action at the MSRP (631-7G) Site Evaluation Area. The Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) requires a Removal Site Evaluation Report/Engineering Evaluation/Cost Analysis (RSER/EE/CA) to evaluate removal alternatives.

The MSRP is located in the center of the Savannah River Site. It is a relatively flat area that slopes gradually to the south and southwest. The majority of the MSRP is lightly wooded with trees and under brush. The central portion of the MSRP contains grass, thorny vegetation, and a few trees. The MSRP contains several large rubble piles, two piles of lumber, transite and bricks, and several empty corroded drums. The MSRP was graded in the mid 1950's for use as short-term storage for portable sheds. The site was used as a shed storage area from the mid 1950's until 1975.

The purpose of the RSER/EE/CA, as required by the National Contingency Plan, is to identify the objectives of the removal action and to develop various alternatives that might satisfy those objectives. This RSER/EE/CA evaluates three alternatives, recommends a removal action, and provides for public comment.

The preferred alternative will include the removal, transport, and disposal of scattered debris (i.e., cross-tie piles, transite/brick pile) from within the boundaries of the MSRP. The removal will also include the loading and transporting of the debris and soils to a CERCLA Approved Landfill.

DOE plans to release this document for a 30-day public comment period beginning November 14, 2005. The preferred alternative may be modified or changed based on public comments. Following the public comment period, an Action Memorandum will be prepared and transmitted to the US Environmental Protection Agency and the South Carolina Department of Health and Environmental Control by DOE-SR.

This RSER/EE/CA, completed under CERCLA is available for public review from November 14, 2005, to December 13, 2005, at the following locations:

DOE Public Reading Room at the Gregg-Graniteville Library at the University of South Carolina (USC)-Aiken campus in Aiken, SC; Thomas Cooper Library Government Documents Department at USC in Columbia, SC; Reese Library at Augusta State University in Augusta, GA; and Asa H. Gordon Library at Savannah State University in Savannah, GA.

This RSER/EE/CA, is also available on the Internet in the SRS Home Page under "What's New", (<http://www.srs.gov>)
